

"Using SQL, create a database for a simple todo list program that has the following columns: task_id (primary key), task_name, description, and is_completed."

create database bootcamp

use bootcamp

```
CREATE TABLE todoist (id INTEGER PRIMARY KEY, item TEXT, min INTEGER);
```

```
INSERT INTO todoist VALUES (1, "Wash the dishes", 15);
```

```
INSERT INTO todoist VALUES (2, "vacuuming", 20);
```

```
INSERT INTO todoist VALUES (3, "Learn some stuff on KA", 30);
```

```
INSERT INTO todoist VALUES (4, "Read homework", 60);
```

```
SELECT SUM(min) FROM todoist;
```

Drop database bootcamp
